

Maintenance

Surgical instruments have to operate reliably in the hand of the surgeon for the welfare of the patient. Day by day.

Therefore skilled reprocessing and good maintenance of the high quality instruments and instrument systems are indispensable.

We **support** our customers and partners with **different documents and services** promoting professional instrument maintenance:

Medicon Courses - SURGICAL Education

Experience the difference of surgical instruments made by Medicon in a two-day course. Gain deep insights into topics like the science of the raw material or the sophisticated production of surgical instruments and implants and ? last but not least ? the correct instrument reprocessing within the instrument cycle of your clinic.

Lectures and hands-on workshops will provide you with profound knowledge about the typical failures in reprocessing, their causes and how to correct them.

Medicon Courses Education take place in Tuttlingen or on-site at your hospital or clinic.
