

Medicon Courses ? Benefit from Experience

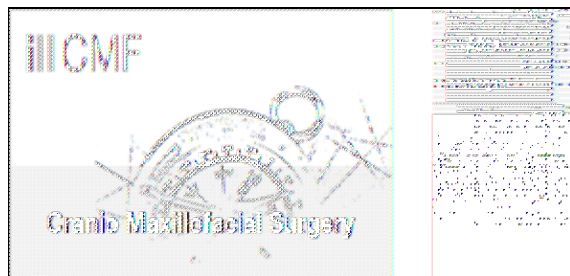

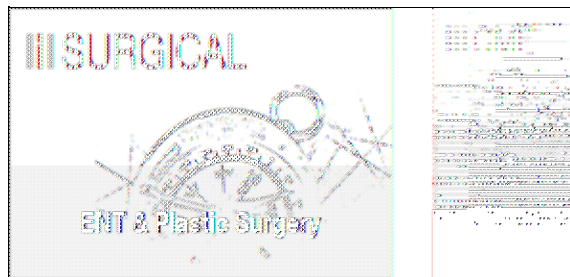

The initial idea for such courses was based on several requests by surgeons of various medical disciplines all over Europe. Their request for intensive high-grade training convinced Medicon to make these courses possible.

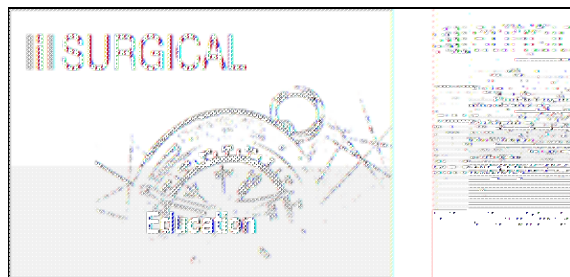

It is our goal to offer an environment where a scientific exchange can be performed within a small selected circle of participants along with a mentor.

High level surgical techniques and therapeutic approaches are addressed in the disciplines of Cranio-Maxillofacial Surgery, Plastic Surgery, Spine Surgery and ENT Surgery. The combination of practically oriented theory and the direct application during selected surgical cases results in a high informational content and immediate increase of knowledge.

Participants are offered the opportunity to have a direct session with the mentor at the operating table.

Experienced surgeons as well as newcomers are our addressees. During the courses there will be time for networking and professional exchange also in regards of special current surgical cases with the participants and mentor.

Ear, Nose, Throat & Plastic Surgery
